Interactive comment on “Spatial heterogeneity in mangroves assessed by GeoEye-1 satellite data: a case-study in Zhanjiang Mangrove National Nature Reserve (ZMNNR), China” by K. Leempoel et al.

Anonymous Referee #3

Received and published: 7 May 2013

1 - Why the title refered only to GeoEyes-1 satellite whereas others satellites have been used?

2 - From ligne 1 and along the text: the quotation of references doesn't follow one logical unit.

3 - Ligne 24 (p. 2596): Formulae or formula?

4 - Page 2601: The mangrove area estimated by GeoEyes-1 satellite (7.75 ha) is too different with that of Ramsar (2000 ha). What could explain this gap? You have also
small mistakes which needed only to read the text.
My overall appreciation is to accept the manuscript.
