2. General comment 2
   The introduction was updated regarding the state of the art and especially with a remark about of the novelty and/or impact in the present knowledge

3. General comment 3
   The discussion was updated trying to make clearer our answer and what are the impacts in a broad sense

4. General comment 4
   Conclusion were rewritten accordingly

5. General comment 5
   Past tense is used for discussion

6. General comment 6
   Units were formatted with negative exponents.

7. General comment 7
   References were updated

8. Specific comments on the Abstract
   All they accepted; Abstract rewritten

9. Specific comments on the Introduction
All they accepted; more background was given and especially we explain why is important this case-study in a more global sense.

10. Specific comments on Material and Methods
All they accepted; site description moved to Material and Methods; format for time standardized. Format corrections done.

11. Specific comments on the Results
Paragraph modified and reorganized.

12. Specific comments on Discussion
A short line on ‘biogeo’ focus was added although we feel that this focus is already met from the very begging being fossil our main age constrain.
We keep the focus on the uplift, not on the origin of the JFR so we reduced the emphasis on the plume hypothesis at the beginning.

13. Specific comments on Conclusions
a. Paragraph updated and reorganized, with mention to the ‘biogeo’ focus in the Discussion.
