Received and published: 6 October 2015

Referee’s comments were very helpful and we have revised the manuscript according to the comments.

Response to specific comment 1 (P6, L8): We have revised accordingly.

“65 mL L-1” -> “65 mL min-1”
Response to specific comment 2 (P15, L10): We found low concentrations of CH3Br (1.3 – 1.4 pmol L-1) and CH3Cl (59 – 66 pmol L-1) in the bottom layer water over the Chukchi Sea Shelf (St. 76) with respect to the concentrations in the surface mixed layer (CH3Br: 2.5 – 2.8 pmol L-1, CH3Cl: 104 – 110 pmol L-1), where the high concentrations of NH4+ and VOIs were found in the bottom layer water. Low concentrations CH3Br and CH3Cl in bottom layer water were found in some stations over the Chukchi Sea shelf. We speculate that bacterial degradations of CH3Br and CH3Cl prevailed against biological productions of these compounds in the shallow bottom layer water of the Arctic (perhaps in cool-type Arctic and sub-Arctic waters). We have found the under-saturation levels of CH3Br and CH3Cl in the surface mixed layer water of the sub-Arctic North Pacific (Ooki et al., JGR, 2010). The sub-Arctic and Arctic oceans would be sink for CH3Br and CH3Cl, perhaps, attributable to their bacterial degradations. We will study on the degradations of mono-halo methane compounds as well as the VOIs in future work.

Response to specific comment 2 (P18, L20): We have revised accordingly.

“CH2Cl” -> “CH2ClI”
